

Evergreen Accessibility Audits

Assistiv Labs' platform-enabled professional audits ensure **accessibility now and into the future**. Manual checks are transformed into **continuous automation**, enabling real-time monitoring and remediation.

Problem

Accessibility is never done. It needs to become a continuous part of your process to ensure what's accessible now remains accessible in the future.

Traditional yearly audits quickly fall behind and produce mountains of bugs. Automatic scanners such as axe by their nature can't match audit-level coverage.

Features

- Full WCAG audits
- Custom end-to-end accessibility tests run on Assistiv Labs' cloud infrastructure leveraging our proprietary testing APIs.
- Collaborative audit planning and creation ensures coverage for your highest-priority user flows.
- Tests exercise both screen reader and keyboard interactions.
- Tests validate actual screen reader text-to-speech output.
- Machine vision validates tab focus.

Pricing

- Pricing is based primarily on the complexity and number of user flows being tested.
- We collaborate with you on test scope to keep costs predictable.

Solution

Assistiv Labs' evergreen accessibility audits deliver more than a final report. We create an automated end-to-end test suite, tailored to your websites and apps, integrated into CI/CD, that can detect over **2x more issues** than scanners.

Audit-quality tests **validate your product's accessibility as frequently as every code change**, enabling fast feedback loops for developers and allowing you to **understand your accessibility posture at all times**.

Our team is your accessibility-expert-in-the-loop, ensuring your team is only notified of **impactful, easy to understand issues**. No flake. No false positives. No wasted time.
